<< Python ML - Midterm Project >>

Q-Learning with OpenAI Gym Environment

On-line Report Turn-in Due : **2022/05/19 12:00pm**

[期中報告注意事項]:

- 1. 請將各組期中專案報告壓縮檔以 **zip** 格式壓縮,上傳至學校的教學平台,檔案名稱如下: **110-2-midterm_Group_OO.ipynb** (例如:110-2-Midterm_Group_1.ipynb)
- 2. 期中報告 .ipynb 電子檔內, 須註明報告標題以及各組員之科系、年級、學號和姓名。
- 3. 期中專案的問題、演算法、內容、檔案格式等相關規定,定義於第2頁中!
- 4. 期中專案報告缺交和遲交者,不能補交,並以零分計算!

[建議]:無論是否能完成所有問題需求,請務必於期限內,上傳期中報告電子檔!

< 前 言 >

本專案旨在利用 OpenAI Gym Environment 的開發套件 [Ref.3] 建構一個虛擬環境,以提供實作 Reinforcement Learning (RL,強化學習) 的 "Q-Learning" 演算法。其中,經由模擬 TAXI 載客環境,建立 Q table,解決 RL 訓練問題。

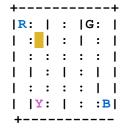

[有關 TAXI 載客 問題 — 簡述]

請用 OpenAI Gym 產生 6x6 的街道環境

(如圖一,:代表街道,|代表分隔島)。

TAXI 需要載運兩位乘客 (分別在兩處地點,以藍色字母標記)。接到第一位乘客時,TAXI 顏色需轉換成綠色;當接到第二位乘客時,TAXI 顏色需轉換成紅

色。之後,將兩位乘客載送至共同目的地(以紫色字母標記)。

[ALGORITHM] : Q-Learning Algorithm

```
Q-learning (off-policy TD control) for estimating \pi \approx \pi_*
Algorithm parameters: step size \alpha \in (0,1], small \varepsilon > 0
Initialize Q(s,a), for all s \in \mathbb{S}^+, a \in \mathcal{A}(s), arbitrarily except that Q(terminal, \cdot) = 0
Loop for each episode:
Initialize S
Loop for each step of episode:
Choose A from S using policy derived from Q (e.g., \varepsilon-greedy)
Take action A, observe R, S'
Q(S,A) \leftarrow Q(S,A) + \alpha \left[R + \gamma \max_a Q(S',a) - Q(S,A)\right]
S \leftarrow S'
until S is terminal
```

[Problem]: Turn in the "TAXI Passengers Project" report with the entire

OpenAI Gym virtual environment setup files and Jupyter-Notebook codes.

[Hint]: MDP – State Space (how many states?), Action Space, Rewards,

Q-values (Q-Table)!!

Good luck!!
